LAST NAME: Ortega Menéndez FIRST NAME: Mónica

LAST NAME: Roques Sanchez FIRST NAME: Andrés

Functional requirements. Elaborate a Use Case Diagram for the course main case study: Logistics Transportation (LT). Consider the following actors:

- **Customer**: Requests the transportation of cargo from the origin warehouse to destination. The customer is allowed to manage transport orders (for instance request transport orders, monitor shipping status, receive trouble tickets, and confirm final arrival)
- LT Company (**Forwarder**): Logistics company that manages the shipping (transportation of cargo) to fulfil the customer's requests. In order to do so, the Forwarder may contract the services of one or more Carrier companies that physically handle the cargo, and which possess freight transport vehicles (for instance, wagons, planes, ships) for that aim. The Forwarder can use the system to support several business processes: Manage transport orders (monitor shipping end-to-end, generate trouble tickets and update shipping to solve incidents and issues), Plan routes (for instance set up routes between origin and destination premises along a number of intermediate hubs to optimise shipping), Manage carriers (for instance contracting Carriers and allocating Carriers to route legs) and Monitor routes (for instance real-time monitoring of vehicles and cargo location and status)
- **Carrier**: Companies contracted by the Forwarder to transport goods from origin to destination or between intermediate points (warehouses, multimodal transport hubs, etc.) in a transport route. Carriers can use the system to Monitor routes (for instance, real-time monitoring of vehicles and load for allocated route legs) and Manage load (for instance managing loading and unloading operations and arrival to hubs or destination).
- **IoE**-Gateway. External system that collects and aggregates Internet-of-Everything events (sensors, devices, business events, human actions, external systems, etc.) that allow Carriers and Forwarder to monitor the cargo transport along the route.

Main use case. Select among the identified uses cases, the main one (according to business value and usage order)

Manage Transport Orders

Sandbox

Epic
Manage Transport Orders

User Story
As a customer, I want to create a new transportation order so I can ship my cargo from origin to destination

User Story
As a forwarder, I want to update shipping so I can solve incidents and issues

Epic
Plan Routes

User Story
As a forwarder I want to set up routes between origin and destination so I can optimize shipping

User Story
As a forwarder I want to adjust the route of an order in real time so I can avoid delays due to incidents

Epic
Manage Carriers

User Story
As a forwarder, I want to contract carriers so I can ensure that availability requirements for the trip are met

User Story

As a forwarder, I want to allocate carriers to the route legs so I can reduce delivery times

Epic

Monitor Routes

User Story

As a forwarder I want to real-time monitoring of vehicles so I can make sure that they are in the correct section

User Story

As a carrier I want to monitor the cargo in real time so I can make sure they are on the assigned route segments.

Epic

Manage Load

User Story

As a carrier I want to managing loading and unloading operations so I can ensure delivery times are met

User Story

As a carrier I want to arrival to hubs or destination so I can ensure that it is transported without risk of deterioration

Change Request

Improve the user interface to make navigation easier

Knowledge Acqusition

Investigate route optimization methods to reduce delivery times

Non-Functional Requirements

Ensure system scalability to handle a large number of simultaneous orders without affecting performance

Product Backlog

RELEASE 1

User Story

As a customer, I want to create a new transportation order so I can ship my cargo from origin to destination

P 8

User Story

As a forwarder, I want to update shipping so I can solve incidents and issues

P 6

User Story

As a forwarder I want to set up routes between origin and destination so I can optimize shipping

P 3

User Story

As a forwarder I want to adjust the route of an order in real time so I can avoid delays due to incidents

P 5

RELEASE 2

User Story

As a forwarder, I want to contract carriers so I can ensure that availability requirements for the trip are met

P 3

User Story

As a forwarder, I want to allocate carriers to the route legs so I can reduce delivery times

P 2

User Story

As a forwarder I want to real-time monitoring of vehicles so I can make sure that they are in the correct section

P 8

User Story

As a carrier I want to monitor the cargo in real time so I can make sure they are on the assigned route segments.

P 5

User Story

As a carrier I want to managing loading and unloading operations so I can ensure delivery times are met

P 3

User Story

As a carrier I want to arrival to hubs or destination so I can ensure that it is transported without risk of deterioration
